NetApp – AI in Data Science

A Journey of Confidence and Growth

My name is Monika T M from Bangalore. I completed my Bachelor of Engineering in Computer Science from CMR Institute of Technology. I come from a family of four. My father and brother work hard to support us, but due to financial constraints, I could not afford paid professional courses after graduation. When I came across the NetApp, Nasscom Foundation program by Seventh Sense Talent Solutions on social media, I saw it as a life-changing opportunity because the training was completely free of cost.

After college, I realized that only academic knowledge was not enough. I lacked practical skills, project experience, and confidence for placements. Joining this program was one of the best decisions I made.

The training was practical and industry-oriented. I gained hands-on experience in Python, Data Preprocessing, EDA, Data Visualization, and AI-Powered Predictive Analytics. Apart from technical skills, the program also improved my communication, presentation, and interview skills through mock interviews and regular feedback.

The mentorship and placement support were very helpful. The trainers guided me in resume building, LinkedIn optimization, aptitude, and interview preparation, which boosted my confidence a lot.

Successfully completing this program and earning a certification from NetApp, Nasscom Foundation, and Seventh Sense Talent Solutions is a proud moment for me. This program has truly transformed me technically and personally.

I am sincerely grateful to NetApp, Nasscom Foundation, and Seventh Sense Talent Solutions for this wonderful opportunity. This initiative has brought me one step closer to my dream of building a career in IT and supporting my family.

Thank you.
